**On the above-OK.mentioned turbine-engines a borescopic inspection is carried out to view the condition of the combustion chamber, and the turbines. During this inspection no cracks / overheating (blade tips) of turbine wheels are found and no significant burn or disortions of nozzle-guide-vanes are found.The ETPC turbine tech team emphasizes that this boroscopic inspection is only additional to the normal engine inspections and only a moment view.No expressed or implied warranty of safety is intended nor may be inferred from this inspection.**
