

15 January 2026

Subject : **ETPC Restrictor Limited Superstock**

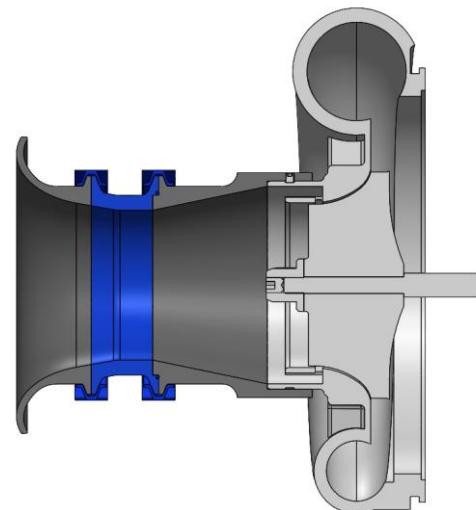

Dear Members / Drivers,

We would like to inform you that, following the recent vote, the restrictor regulation for the Limited Superstock class has now been officially approved and finalized.

At this moment, we are actively working on the production of these restrictors.

The following points have been approved by vote:

- The restrictor will be supplied by the National Organisation / ETPC (all restrictors will have the same dimensions and will be produced by one manufacturer).
- The restrictor must be mounted at a maximum distance of **100 mm** from the front of the turbo intake wheel.
- The purpose of the restrictor is to limit the maximum achievable power by restricting the amount of air flowing through the engine. At this moment, the limiting factors are the turbo and the cylinder head.
- Turbo size is free.

This regulation will remain in force in this form at least until 1 January 2029.

(Blue coloured part will delivered)

Attached to this message you will also find the technical drawings including all dimensions of the restrictor. These are provided so that teams may already start making preparations for the installation of the restrictor if they wish.

If members or drivers wish to order a restrictor, please indicate this by contacting **ETPC-secretary@tractorpulling.com** and provide the following information:

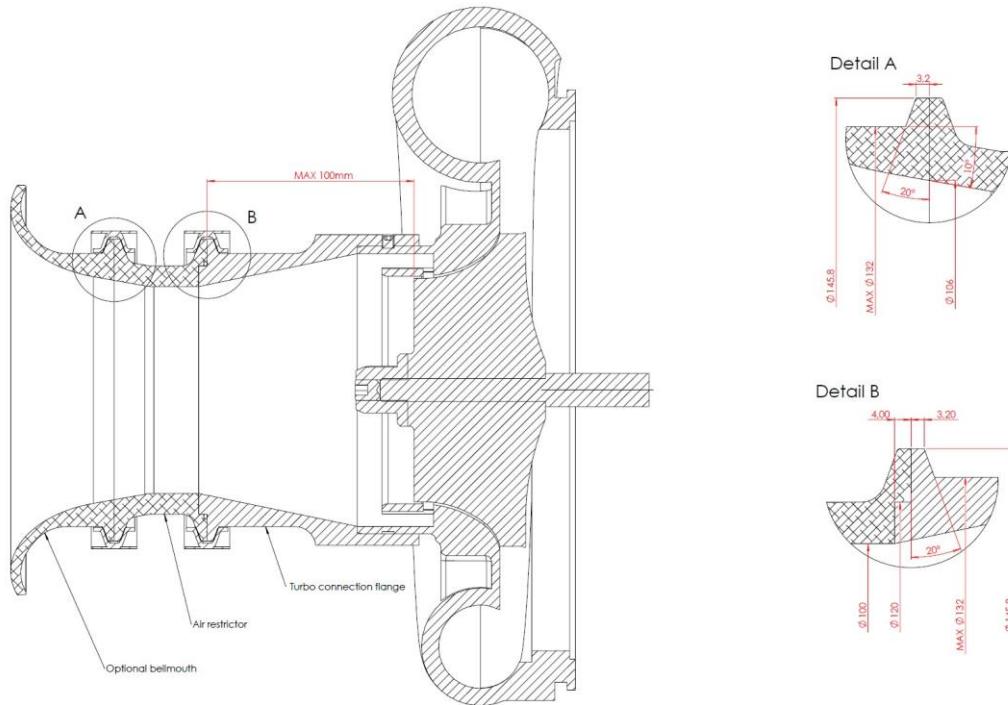

- Tractor name
- Name
- Address
- ZIP code
- Country
- Invoice name/ address

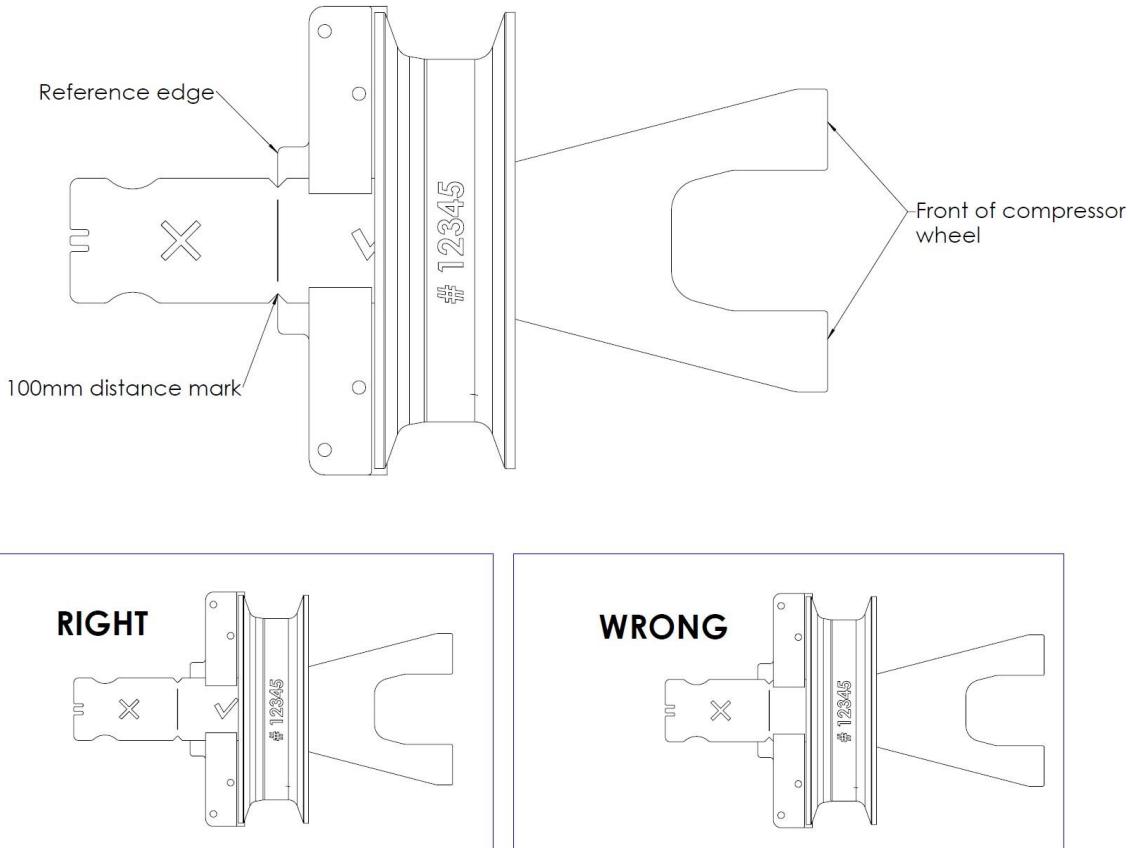

The restrictors are expected to be available from approximately the end of February. The cost of one restrictor, including the measuring instrument, will be €225,- excluding shipping costs. This consists:

- Restrictor
- 2 V-band clamps
- 1 o-ring
- Laser engraved ETPC number
- Checking tool

Restrictors may also be ordered by tractors that are not registered in the Eurocup. However, participation in Eurocup events and the European Championship requires that this restrictor is installed. Restrictors will be checked by the **Tech and Safety Board**. Home made restrictors are not allowed.

- Restrictor Measurements

- Restrictor Measuring Tool

For and on behalf of the ETPC Daily Board
